

Testing And Validation Concept Engineer*

High competence and the passion for new challenges make our Electrics/Electronics division the guidepost to the automotive future. Take your next step and support our team.

This will make you grow:

- Identify and understand the functional and non-functional requirements of the project to clearly define the objectives
- Explore and identify innovative approaches to improve the efficiency, scalability, and reliability of Testing activities for complex systems
- Gather and integrate technical inputs from other specialists (Mission System and Airframe) to ensure alignment and synchronization of the development teams
- Coordinate and monitor the planning of Testing activities, ensuring all phases are aligned with the project objectives
- Contribute to the drafting of a document that defines the approach, methodologies, and tools used for Testing activities

And this is how you'll take us forward:

- Good English language proficiency (spoken and written), at least B2 level
- Proficient in the use of standard tools (MSOffice package)
- Planning and organizational skills
- Problem-solving skills
- Teamwork skills
- Ability to work independently in carrying out assigned tasks
- At least 2 to 3 years of experience in projects involving interdisciplinary teams in the following topics:
- Design and implementation of tests on complex systems, preferably in the avionics field
- Current test technologies
- Research and Development (R&D) activities
- Synthetic/virtual test systems

- Design/test system requirements analysis
- Agile management methodologies
- Modular architectures and/or Integrated On-board Computing

* Gender, age, nationality, or religion are not relevant for us – you are all that matters.

Sounds like your next challenge? Then we'll be looking forward to your application!
